

Fish Barrier Identification Form

The Canadian Wildlife Federation and partners including the Pacific Salmon Foundation, Pacific Streamkeepers Federation and the province of British Columbia's Fish Passage Technical Working group secured funding from the BC Salmon Restoration and Innovation fund to bring together several partners, including federal and provincial governments, non-governmental organizations, First Nations, and communities to prioritize fish passage remediation efforts across BC to maximize benefits for Pacific salmon and Steelhead. If you would like a barrier to be considered for remediation, please fill out the table below. If some of the information is unavailable (e.g., which fish species present upstream of the barrier), write "unknown".

Organization proposing barrier for consideration:	
Name:	
Phone number:	
Email:	
Stream name:	
GPS coordinates of barrier:	
Coordinate System:	
Barrier owner (if known):	
Fish species present downstream of the barrier:	
Fish species present upstream of the barrier:	
Are there any barriers downstream of the target barrier? If so, describe them:	
Are there any barriers upstream of the target barrier? If so, describe them:	
Potential habitat gain upstream (km):	
Supporting documentation links/attachments:	

The Canadian Wildlife Federation can then assist you by reviewing relevant databases such as EcoCat (The Ecological Reports Catalogue), Fisheries Inventory Data Queries (FIDQ) and Cross-Linked Information Resources (CLIR). Once this information has been compiled, we will connect with you to review and confirm.

Thanking you in advance for sharing this information,

Gerry Leering, RPBio.
